Lewis acid / Base-free Strategy for the Synthesis of 2-Arylthio and Selenyl Benzothiazole / Thiazole and Imidazole

<https://doi.org/10.1515/hc-2020-0119>

Received January 27, 2020; accepted January 27, 2021.

Abstract: A Cu(II)-catalyzed Csp²-Se and Csp²-Sulfur bond formation was achieved with moderate to good yields without the aid of Lewis acid and base. The reaction is compatible with a wide range of heterocycles such as benzothiazole, thiazole, and imidazole. Also, this typical protocol is found to be active in thio-selenation via S-H activation. Additionally, we proposed a plausible mechanistic pathway involving Cu(III) putative intermediate.

Keywords: Selenation, thiolation, diphenyl diselenide, thioaryl and selenoaryl derivatives, chalcogenide

Introduction

Organoselenium scaffolds engrossed much attention from chemists owing to their varied pharmaceutical activity such as antioxidants [1-5], anti-inflammatory [6-8], and antimicrobial agents [9]. Additionally, the organoselenium molecular entities were assessed for anticancer [10-11], neuroprotective [12], and antiviral properties [13-14]. Recently, selenium-containing molecules have gained a great deal of significance due to the optical activities of organic materials [15-16].

The functionalization of C–H bonds adjacent to a hetero-atom utilizing cross-coupling is a conceptually

ideal process. Also, this strategy represents an extremely attractive and competent route for the substitution of C–H bond. Moreover, the strategy is considered to be straightforward and has a step-economic advantage than traditional reactions [17-18]. Primarily, this process was induced by a sub-stoichiometric transition metal in combination with additives and bases. This regioselective oxidative coupling strategy enabled the synthesis of various pharmaceutically active heterocyclic molecular motifs [19-21]. Various groups have reported the cross-coupling of C–H bonds adjacent to a nitrogen atom to give new C–C, C–X (X = S, Se, and Te) bond containing molecules. In particular, the construction of new C–S and C–Se bonds via oxidative functionalization of a C(sp²)-H bond of benzothiazoles, thiazoles, benzoxazoles, azoles, benzimidazole, imidazole, and oxadiazole has been reported elegantly [22-29]. Amongst such strategies, a Lewis acid-catalyzed, stoichiometric Cu(II)-mediated thiolation reaction between heteroarenes and thiols strategy offers an appealing alternative to the conventional methods [30] (Scheme 1).

However, all these methods require stoichiometric amounts of external oxidants and bases. Hence, there is still a great need for the development of sole oxidant as air and base free protocol to produce various thioaryl and selenoaryl derivatives of benzothiazoles, thiazoles, azoles, benzimidazole, and imidazole.

Results and discussion

In our continuous interest in developing base-free Cu catalyzed reactions [31-34], we assessed the direct selenation and thiolation of benzothiazole. Initially, conducting the reaction between benzothiazole **1a** (1 equiv.) and diphenyl diselenide **2a** (1.2 equiv.) in the presence of Cu(OAc)₂ (100 mol%) and heating 100 °C in 1,4-dioxane resulted in the desired product **3a** at a 54% yield (Table 1, Entry 1). When the catalyst loading reduced to 50 mol%, the same

Abstract: The monopodial orchid *Pelatantheria insectifera* is reported here as a new generic record for the state of Andhra Pradesh (India). Further, detailed diagnostic description, colour photo plates for easy identification and note on ecology were provided.

Keywords: Orchid, Sileru Forest Range, Visakhapatnam.

Orchidaceae is the second largest family in the flowering plants, with about 28,000 species distributed in the world (Chase et al. 2003, 2015; Willis 2017; Fay 2018). They are distributed throughout the world except the hot desert and Antarctica (Kumar et al. 2007). India represents a total of 1,256 orchids belonging to 155 genera of which 388 orchids are endemic to Western Ghats (Singh et al. 2019) and a total of 54 species belonging to 30 genera of orchids are reported from Eastern Ghats of Andhra Pradesh (Venkaiah et al. 2020).

The genus *Pelatantheria* Ridl. is an epiphytic or

lithophytic orchid distributed in Indo-Malesia region (Jalal et al. 2012; Govaerts et al. 2022). It is known to contain eight species, viz., *P. ctenoglossum* Ridl., *P. eakroensis* Haager, *P. rivesii* (Guillaumin) Tang & F.T.Wang, *P. woonchengii* P.O'Byrne, *P. scolopendrifolia* (Makino) Aver., *P. bicuspidata* Tang & F.T.Wang, *P. insectifera* (Rchb.f.) Ridl., and *P. cristata* (Ridl.) Ridl., which are distributed throughout Bangladesh, Bhutan, Cambodia, China, India, Japan, Korea, Laos, Myanmar, Nepal, Thailand, Vietnam, and western Malaysia (Jalal et al. 2012; Govaerts et al. 2021). In India only one species *P. insectifera* is reported from Arunachal Pradesh, Assam, Chattisgarh, Jharkhand, Manipur, Meghalaya, Mizoram, Nagaland, Odisha, Sikkim, Tripura, and Uttarakhand (Jalal et al. 2012). But, so far it is not reported from Andhra Pradesh.
